

50 YEARS OF DISCOVERY SCIENCE DRIVING CLINICAL BREAKTHROUGHS

A timeline of selected major scientific discoveries and clinical breakthroughs in the quest to find cures for cancer. Also shown are FDA approvals of first-in-class revolutionary therapeutics. These anticancer treatments have helped save lives and have informed new and novel strategies to effectively treat a broad spectrum of cancer types. This report also highlights discoveries of key genes and pathways as well as development of breakthrough therapeutics against lung cancer, melanoma, and HPV-related cancers. Also highlighted elsewhere are milestones in developing the KRAS inhibitor sotorasib, angiogenesis inhibitors, and immune checkpoint inhibitors.
